Today, we will talk about David Aguilar-the man who has the first Lego arms.

David Aguilar, also known as "Hand Solo," is a young Andorran inventor famous for creating a functional prosthetic arm from LEGO bricks due to a congenital condition called Poland Syndrome, which prevented his right hand from fully developing.

Starting at age nine, he created various prosthetic arm versions, including the MK-1, and achieved a Guinness World Record in 2017. Aguilar is currently studying bioengineering, motivational speaking, and promoting inclusion.

**Thank you for listening.
GOODBYE!**
